First Trimester Screen & NIPT Bundle

Our dedicated team of medical professionals are committed to delivering exceptional service, offering the highest level of pregnancy care, whilst offering great value for money with our comprehensive care bundle

Comprehensive Pregnancy care:

Non-invasive prenatal testing (NIPT) is the most widely requested form of early pregnancy screening used to check for trisomy 21 (Down syndrome) and other common chromosomal aneuploidies.

Another important way to screen for chromosomal aneuploidies is through the combined First Trimester Screen (cFTS), previously known as the Nuchal Translucency scan. If you decide to have NIPT, cFTS is still important for other valuable information such as:

- Accurate dating of your pregnancy
- Checking your baby's early structural development
- Ability to screen at an early stage for some spinal, cardiac and placental conditions
- Screening for Pre-Eclampsia (high blood pressure in pregnancy) meaning your doctor can recommend additional monitoring or intervention if considered high risk

cFTS should therefore ideally be performed in conjunction with NIPT, however it is also effective on its own if you have chosen not to have NIPT. Having both helps ensure comprehensive first trimester care.

Included in your care bundle is genetic counselling to provide guidance on your pregnancy testing options. Our experienced genetic counsellors specialise in explaining the advantages, disadvantages and limitations of genetic testing and can help you make an informed decision that is right for you and your family.
